I had some problems with latency when running this on Win 7 and a Laptop, and the Dev responded quickly with offers of a refund. THAT'S A GOOD DEV!

The game itself is worth the price if you like puzzle games, and there are some interesting mechanics that should have you scratching your head a bit. Just be aware that the recommended system specs on the store page really do matter. I was able to play the game despite these issues, and enjoyed it, but please **don't ignore the specs and then go giving the dev poor reviews because you have issues!!!**
